Why choose vision

Because we have only one mission in mind:

to help our clients achieve their objectives through the effective use of information technology.

Our fully integrated software solutions will revolutionise the way you distribute and manufacture products, manage projects, improve customer service and thereby increase your revenues.

We will make your life easier by simplifying your business processes and reducing your problems while providing the tools to analyse your data better.

After all, it is not enough to process data efficiently.

To stay competitive, such information has to be used strategically.

“At Vision, we look after your business”

About Vision

Vision/R4 Corp is a Canadian based company founded in 1996 with a subsidiary Vision (Four) Africa Co. Ltd in Kenya.

We specialise in developing and implementing integrated enterprise management software solutions.

Our team of skilled implementation specialists will take your “project to integrate” and turn it into an “integrated project”.

APOGEE

We are the author of the Apogee software.

Apogee is a **customizable modular ERP (Enterprise Resource Planning) solution** that resulted from decades of experience in business management software development, which produced a system that is robust, rich in functionality and designed with the end-user in mind.

We control its content and destiny. Moreover, its very competitive concurrent user pricing makes it very affordable. Using an advanced object-oriented development framework, industry standard complementary tools and operating on the leading architectures resulted in our integrated business management software that is robust, rich in functionality and designed with the end-user in mind. Our suite of applications comprises core modules for financial control, project management, distribution logistics and manufacturing as well as optional modules designed to support individual specialised needs.

Our prime focus during the design of our software consists on understanding how you do things, as opposed to what you do. This business process creates a most flexible software suite that will enable your organisation to overcome those obstacles and challenges needed to be resolved in order to rapidly attain your corporate objectives.
